Module 5: I am a Cybersecurity Specialist

I am excited to push myself in this class and one of the things I really want to learn how to do in this course is to learn how to comprehend difficult material quickly. I have a general understanding of cybersecurity and have always been interested in puzzles/ problem solving. I believe this course will be a great exercise in critical thinking and will help me to push myself as a business owner as well as a future technology consultant. I am still unsure what path I will take following this course but I am very excited to expand my skill set and see where that path leads me.

I believe this course will help my career because I will have the opportunity to meet some exceptional professors/ TAs who are involved in the security industry, as well as network with fellow classmates who will soon be joining the workforce. As a recruiter, I want to be someone who other professionals can trust. By getting to know people who will be working in the field, my hope is that they will vouch for me if their team ever has a need for an external recruiter. I want to be the best recruiter possible, and I believe this course will help me understand the problems a security team may face, thus giving me an insight into their hiring needs.
